

## MOUNTING

Wired diagrams supplied with suitable "Picture Frame" complete with concealed fixing studs to facilitate mounting onto or into a control panel.

## VINYL GRAPHIC DIAGRAMS

All line work, arrow heads, valves and vessels cut to required size. Self-adhesive backing to stick direct to panel.

## REAR PHOTO ETCHED

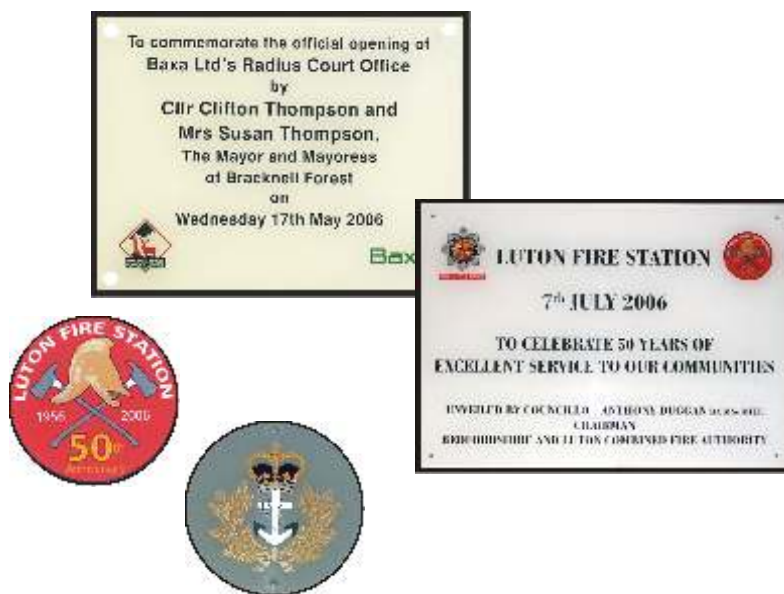

This method is mechanical photo etched onto clear acrylic sheet, machined and coloured to make up the required picture/diagram. This type of graphic can be modified at our works or on site depending on complexity.

Diagrams may be:

1. Back colour coated to a suitable background colour for two colour systems.
2. Black outline detail in filled appropriate colours to give a multi colour diagram. Coloured diagram then coated with a suitable background colour.

Colour to B.S. charts preferred.

Base Material: Clear acrylic

Rear Photo Etched Signs

## ART WORK

We can fully design graphic work from just a sketch and then submit prints for approval. To ensure sharp well-defined images we recommend our experienced designers prepare.

Hand Painted Graphics

## FRONT PHOTO ETCHED

This method of production is similar to REAR PHOTO ETCHED except image is etched into surface paint finish or mounting plate. Surface finish of mounting plate to be air-drying enamel. This process is not suitable for etching into stove enamel finishes. Images may be multi coloured with or without black outline.

Fully coloured diagram sealed finally with cold cured lacquer -usually semi-matt: thus giving a good degree of scratch proofing.

## CUTOUTS

Cut outs and holes for accessories are accurately machined during the course of manufacture.

We also provide the following services

## HAND PAINTED

Hand painted graphics direct to the panel face on your premises.

## SILK SCREENED.

Silk screened onto Steel or Aluminium. The above material would be stoved to background colour, graphic then screened to provide a permanent image, alternatively directly onto stainless steel.

Samples available on request.
